

# Colocation Hosting

High Control | High Convenience

## What is colocation?

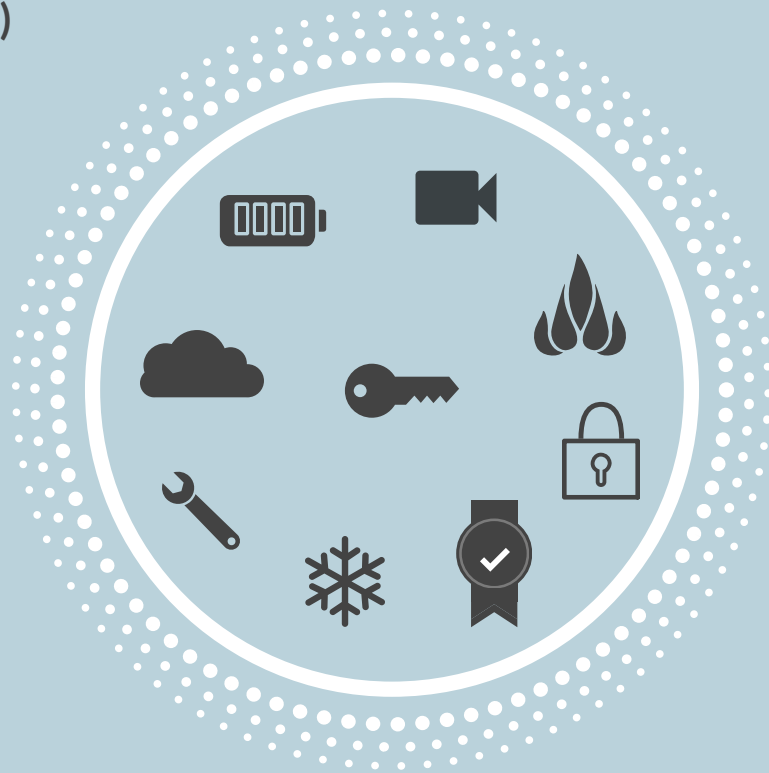

With colocation you provide your own equipment and a data center provides the reliable and high performance infrastructure. This includes the rack space, power, high speed Internet bandwidth, redundant backbone, and physical security.

## A Worry-Free Hosting Environment

- High uptime provides for superior stability
- Helping minds and hands available as needed to fill any skill gaps
- Safe and secure environment for your mission critical equipment and data
- Reliable Internet connectivity
- The perfect start towards standards compliance
- Ability to focus on core business demands rather than infrastructure needs

## Key Data Center Features

- ✓ Uninterruptible Battery Power (UPS)
- ✓ Generator Power Backup
- ✓ Blended Internet Bandwidth
- ✓ Physical Security
  - Data room and rack security
  - Climate controls
  - Multiple levels of entry security
  - Video surveillance
  - Fire Protection
- ✓ Standards Compliance
- ✓ On-Site Technical Support

## Is colocation right for my business?

Do you have a skilled IT staff with a broad knowledge of server administration, Internet, hosting, security, and infrastructure standards?

Do you have the funds to purchase the required IT equipment like servers, routers, switches, and firewalls?

Do you have a requirement for the highest levels of security or other compliances?

Is your IT team located close to the data center?

→ If you answered **YES** to most or all of these questions, colocation may be the best solution for you.

Contact NetSource today to see how we can meet your colocation needs.
